

File Download

A File Download is used to host a file on your site. Visitors click on a link to the File Download, and depending on their web browser and the file type, it downloads immediately or opens for viewing in their browser.

Ways to create a File Download:

- Click the "New" item in the toolbar and select "Choose..." at the bottom, then navigate in the Finder window to the file.
- Choose "New → Choose.." from the Insert menu, then navigate in the Finder window to the file.
- Drag and drop a file from the Finder or another app into the Site Navigator.

If you would like to make sure the file is going to be a download and not just viewable in the visitors web browser, first zip the file. You do that by clicking on the file, then control-click → compress, then add it to your Sandvox site.
